Check In-Out

Overview

The IntelliTrack Check In-Out software is designed to be used with portable or fixed station barcode readers to provide a complete turnkey solution to manage your inventory. Check In-Out functions are available to handle everything from routine physical inventories to managing a perpetual inventory and tracking items checked out to employees and/or customers. All IntelliTrack modules are written in Microsoft® Access XP and include the source code should you want to customize the Check In-Out system for your specific needs.

The IntelliTrack Check In-Out portable software enables the portable barcode reader to collect inventory data automatically. It provides for the collection and storage of user ID, both consumable and checkout items, locations, and quantities, all with the accuracy, speed, and simplicity of barcodes.

The IntelliTrack software includes a ready to run, PC compatible SQL Server database to manage all of your inventory data. IntelliTrack includes standard reports, queries, and barcode label printing capabilities.

Use Check In-Out's Query function to view data using standard queries. These queries present a non-editable listing of data.

Use the Check Out form to:
-Check out non-consumable items to an employee or customer.
-Issue consumable items to an employee or customer.
-Process checked out and consumable items on the same order, with a single form.
-Automatically update currently available stock and history data.
