IntelliTrack

Overview

The IntelliTrack Stockroom software is designed to be used with portable or fixed station barcode readers to provide a complete turnkey solution to manage your inventory. (If you have only purchased the Stockroom module, you will need to purchase your hardware separately.)

Stockroom functions are available to handle issues from Inventory, Receipt into inventory and routine physical inventories to managing a perpetual inventory. All IntelliTrack modules are written in Microsoft® Access XP and include the source code should you want to customize the Stockroom system foryour specific needs.

The IntelliTrack Stockroom portable software enables the portable barcode reader to collect inventory data automatically. It provides for the collection and storage of user ID, inventory, locations, and quantities, all with the accuracy, speed, and simplicity of barcodes.

The IntelliTrack software includes aready to run, PC compatible SQL Server to manage all of your inventory data. IntelliTrack includes standard reports, queries, and barcode label printing capabilities.

If you issue an item that is not in the location pull-downlist, Stockroom adds the item definition to that location and enters a negative quantity. This allows you to issue an item even if an insufficient quantity appears in the Stockroom system, but the physical item does exist in stock. Stockroom flags the transaction with a negative quantity to generate a Negative Quantity Report and locate this sort of transaction

The main difference between	Tra Da Ret
Stockroom's Receipts function and	10.00
the Stock Issues, is that you receive	
items instead of issuing them. You	
can perform receipts without an	Dep
existing item definition; the Receipts	1
function allows you to add new	
items as you go.
